

Assignment 5:

Final codes:

```
select * from ottawa.CUSTOMERS
```

```
select * from ottawa.SUPPLIERS
```

```
select * from ottawa.PRODUCTS
```

```
select * from ottawa.TRANSACTIONS
```

The screenshot displays the Microsoft SQL Server Management Studio (SSMS) interface. The query editor shows a SQL query that selects all data from four tables in the 'ottawa' database: CUSTOMERS, SUPPLIERS, PRODUCTS, and TRANSACTIONS. The query is executed successfully, and the results are displayed in a grid format. The grid shows data for two customers, two suppliers, two products, and one transaction. The status bar at the bottom indicates that the query was executed successfully and that there are 8 rows in the results.
